Conductive Education (CE), origination in Hungary, combines education and therapy into a system serving people with neurological impairment such as cerebral palsy, parkinsonism and stroke. The remarkable progress as demonstrated by clients in Hungary as a result of CE intervention has aroused international interest. This presentation will describe clients from infancy to adulthood treated by the Spastic Association of Hong Kong in the Jockey Club Conductive Learning Center (CLC) in 1994. It will promote CE for the benefit of a wider population of people with neurological impairment.
