

Workshop on “Management of Hemiplegia with Childhood Onset using CIMT in Conductive Pedagogical Approach”

Aim :

CIMT is one of the strong evidence-based intervention to improve upper limb function for individual with neurological disorders, especially for Hemiplegia. It provides intensive and repetitive chance of exercising the weaker limb, which promotes brain's ability to form connection for functional enhancement. Conductive Pedagogical Approach is a holistic, integrated system, helping individuals to develop better autonomy and self-sufficient “ortho-functional” personality. The aim of the workshop is to enrich rehabilitation professionals to apply the therapeutic intervention in a holistic pedagogical approach, to maximize the benefit gains by individuals.

Training Content :

1. Introduction of the Core principles of Conductive Pedagogy
2. Pre-requisites for implementation of Conductive Pedagogical approach
3. Basic facilitation skills under Conductive Pedagogical approach
4. Definition and principles of CIMT with evidence supporting its effectiveness in rehabilitation
5. Practical application of CIMT – Activity design and management of implementation in whole day consideration under Conductive Pedagogical approach
